

PRODUCT DATA SHEET

Product ID: RGA26
Description: 6m Light Fall Arrest Block

Accredited to: EN 360
Material: 5mm galvanised steel cable, can also be supplied with high quality 5mm stainless steel cable
Connectors: Double action high tensile steel alloy
Weight: 5.2kg
Features: Fall indicating connector
Max fall arrest load: <6kN

A lightweight block, the RGA26 is a multi-purpose fall arrest block, which allows uninhibited movement during normal working activity.

The carrying handle is part of the cast alloy housing and can be connected to the anchorage point using soft slings or a karabiner. The RGA26 is used throughout the industry to provide semi-permanent protection in work areas, and is also used on lorry sheeting gantries in conjunction with a beam trolley (RGT1). For self-connecting to the block, it is recommended that the operative uses an extension strop (RGL4) in order to ease the task. The RGA26 has a working length of 6m and can be supplied with galvanised or stainless steel wire rope.
